Education

Temple University

Bachelor of Science in Computer Science | GPA: **3.95/4.0**

Philadelphia, PA

Expected May 2026

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Software Design, Database Systems, Machine Learning, Cloud Computing, Deep Learning

Technical Skills

Languages: Python, C++, C, JavaScript, TypeScript, Java, SQL, HTML/CSS

Frameworks & Libraries: React, Next.js, Node.js, Express.js, Jest, PyTorch, Hugging Face, FastAPI

Developer Tools: Git, Linux, Docker, Vim, PostgreSQL, MongoDB, Google Cloud Platform, Nginx, GitHub Actions, REST API, Agile, Jira, Postman

Work Experience

Software Engineer Intern

February 2024 - June 2024

8by8

Remote

- Drove **20%** increase in page load performance and SEO rankings by migrating **10+** legacy React components to Next.js with TypeScript, reducing technical debt and enhancing code maintainability.
- Strengthened quality assurance by developing Jest unit tests and reusable Storybook components integrated into CI, achieving **100%** test coverage and preventing software regression.
- Improved application security by implementing Cloudflare Turnstile on client and server sides, reducing bot traffic.
- Conducted peer code reviews, applying SOLID design principles and dependency injection to improve modularity.

Projects

Samplehub | React, Node.js, Express.js, PostgreSQL, GCP, Docker, Nginx

- Built and deployed a fullstack music sample sharing platform serving **40+** users with **99.5%** uptime, leading backend development and cloud infrastructure on a 4-person team.
- Reduced average PostgreSQL query latency by **50%** through 3NF normalization and indexing on high-traffic queries.
- Managed production environments on Google Cloud Platform, configuring Linux VMs, Nginx reverse proxy, and Docker containerization with automated GitHub Actions CI/CD pipelines.

WebtoonMTL | Python, Hugging Face

- Developed a Korean to English neural machine translation desktop application by leveraging OCR and Hugging Face Transformers to create translations of scanned images.
- Achieved **0.44** BLEU and **0.64** chrF by fine-tuning models on **10K+** parallel Korean-English text samples, improving scores by approximately **9%** over baseline models.

Ezclips | React, Node.js, Express.js

- Built a Chrome extension to upload clips from Twitch streamers to TikTok, generating **87K+** views and reducing manual content creation time by approximately **80%**.
- Integrated Twitch and Chrome APIs to identify top-performing clips based on view metrics and handle video storage and uploads.

Gympal | React Native, Node.js, Express.js, MongoDB

- Designed a RESTful API backend for a mobile fitness app, implementing rate limiting and MongoDB data models to enable workout logging and nutritional tracking.
- Implemented email and password authentication with bcrypt hashing and JWT session management.
